

3. When the building is complete, the new school will also have a brand new playground. It will have 4 different play structures so the children can vote for their favourite. Each circle in the table below represents 2 votes.

					
Gym Set	Climb Wall	Slide	Covered Arena	Willow Den	Mud Kitchen

 = 2 votes

There are only 2 votes for the wall.

The mud kitchen and willow den both got 4 votes.

Are Jaylan and Henrietta correct? Explain your answer.

Some children were away and could not vote. Mr Henderson asks for their choices the next day. Add these votes to the pictogram.

- Climb wall – 6 votes
- Slide – 2 votes
- Mud Kitchen – 4 votes

4. At the new school, the classes will all have names and the children have the chance to choose what types of names to use for their classes. The whole school votes but there will be so many votes that the Mr Henderson has asked Henrietta and Jaylan to use one square to represent 5 votes. They have the table of results and need to create a pictogram to show the result. Fill in the pictogram using the information from the table.

 = 5 votes

Trees	25	Trees	
Animals	50	Animals	
Countries	40	Countries	
Colours	10	Colours	
Fish	35	Fish	
Shapes	5	Shapes	

How many more votes has the winner than the second place choice?

5. This is the vote **EVERYONE** wants to take part in... time to choose the school pet! In the pictogram below each picture is worth 10 votes.

Rabbit	       
Cat	      
Mice	    
Fish	      

Why have some people voted for half a pet?

Have the fish won because their line is the longest?

Uh oh! Henrietta and Jaylan do not understand this pictogram. Answer their questions to help them understand.
