Birthday (month and year)

Children to use their birthdate and length of their hand to put data on the chart. Chn to measure from base of hand to top of middle finger. Remind chn about using a ruler correctly and measure to the nearest cm.

The DOB on the x axis increases with youngest at the start and oldest at the end.

How will we see if your hand size gets bigger the older you are? What pattern will we expect to see?

Print and use as whole class data chart.
