

## Reasoning and Problem Solving

### Shapes – Same Area

#### Developing

1a. Various answers, for example:

2a. False. Shape A and B have an area of  $18\text{cm}^2$ , but shape C has an area of  $19\text{cm}^2$ .

3a. Yes, he is correct. A shape with a length of 6cm and a width of 4cm will have an area of  $24\text{cm}^2$ .

#### Expected

4a. Various answers, for example:

5a. False. Shape A and C have an area of  $12\text{cm}^2$ , but shape B has an area of  $18\text{cm}^2$ .

6a. Yes, she is correct. A shape with a length of 38cm and a width of 0.5cm would have an area of  $19\text{cm}^2$ .

#### Greater Depth

7a. Various answers, for example:

8a. False. Shape A and B have an area of  $27\text{cm}^2$ , but shape C has an area of  $26\text{cm}^2$ .

9a. Yes, he is correct. A compound shape containing a rectangle 65mm by 40mm and a second rectangle, 5cm by 2cm, will have an area of  $36\text{cm}^2$ .

## Reasoning and Problem Solving

### Shapes – Same Area

#### Developing

1b. Various answers, for example:

2b. False. Shape A and B have an area of  $14\text{cm}^2$ , but Shape C has an area of  $15\text{cm}^2$ .

3b. No, she is incorrect. There are no integers that can be multiplied by 8 to produce 27.

#### Expected

4b. Various answers, for example:

5b. True. All the shapes have an area of  $24\text{cm}^2$ .

6b. Yes, he is correct. A rectilinear shape with a length of 8.5cm and width of 3cm, for one part and 1.5cm by 5cm for the second part, would have an area of  $33\text{cm}^2$ .

#### Greater Depth

7b. Various answers, for example:

8b. False. Shape A and B have an area of  $35\text{cm}^2$ , but shape C has an area of  $36\text{cm}^2$ .

9b. Yes, she is correct. A compound shape consisting of two rectangles, one 25cm by 0.25 ( $6.25\text{cm}^2$ ) and 1.25 by 3cm ( $3.75\text{cm}^2$ ) gives an area of  $10\text{cm}^2$ .
